Objectives and methodology

This course aims to provide practitioners, project partners and evaluators with an overview of the key components, concepts and approaches used in planning, monitoring and evaluation (PM&E). The training is conducted using a workshop approach and includes a high level of participant engagement.

Outcomes

Having completed the course the participants will have:

- An appreciation of the purpose and benefits of PM&E.
- An understanding of the key concepts in planning, monitoring, evaluation and reporting such as effectiveness, efficiency, relevance, sustainability, impact, indicators, baselines and targets.
- An understanding of the importance of integrating monitoring, evaluation and reporting into project planning - and of where PM&E fits into the project cycle.
- A basic knowledge of the different approaches to planning, particularly the Logical Framework Approach (LFA), Theory of Change (ToC) and Outcome Mapping (OM).
- A basic knowledge of data collection and analysis techniques - and their relationship to the different types of evaluation.
