WHAT IF

community-based social innovations could
contribute to enhance healthcare delivery systems?

WHAT IF SOCIAL INNOVATION COULD IMPROVE GLOBAL HEALTHCARE DELIVERY?

Social innovations in the global south have significantly improved healthcare delivery to local communities. The **Social Innovation in Health Initiative** aims to **identify** grassroots innovations in healthcare delivery, **learn from** the individuals and organizations behind them, and **support** these innovators to grow and scale their work across different contexts.

Join us on **22 October 2015** as Dr Lindi van Niekerk and Rachel Chater share stories from their research across **3 continents**, **16 countries** and **25 innovations**. From Bangladesh to Brazil; from urban Kampala to rural clinics in the mountains of Rwanda.

**22 October 2015, 5.30 for 6pm, Frances Ames,
UCT Faculty of Health Sciences
Contact inclusivehealth@gsb.uct.ac.za for more info
or visit <http://www.healthinnovationproject.org>**

This is your opportunity to join a global conversation about finding solutions to the most pressing healthcare challenges of the 21st century.

The **Social Innovation in Health Initiative** is a collaboration of the UCT Bertha Centre for Social Innovation and Entrepreneurship and Oxford University's Skoll Centre for Social Entrepreneurship, with technical and financial support from the Special Programme for Research and Training in Tropical Diseases (TDR) at the World Health Organization (WHO).
