A PARTNERSHIP OF:

UNIVERSITY OF CAPE TOWN  
IYUNIVESITHI YASEKAPA • UNIVERSITEIT VAN KAAPSTAD

## Speaker series #2: ENGINEERING HEALTH INNOVATION

How can **biomedical engineering** and **healthcare** come together? What is **design-thinking** and how can it be applied to health? Join us for a discussion about the **creative process** behind designing healthcare solutions.

### “DESIGNING BEYOND THE DEVICE”

Biomedical design engineer, **Giovanni Milandri**, uses his experiences in **product development** to tackle challenges in the medical field. He is passionate **about multidisciplinary collaboration** and is currently leading a team designing a low-cost blood pressure device being piloted at **Groote Schuur Hospital**, a project that started during his studies at Oxford University.

Giovanni is currently a doctoral candidate at UCT, looking to understand the effect of an orthopaedic rehabilitation device after knee surgery.
